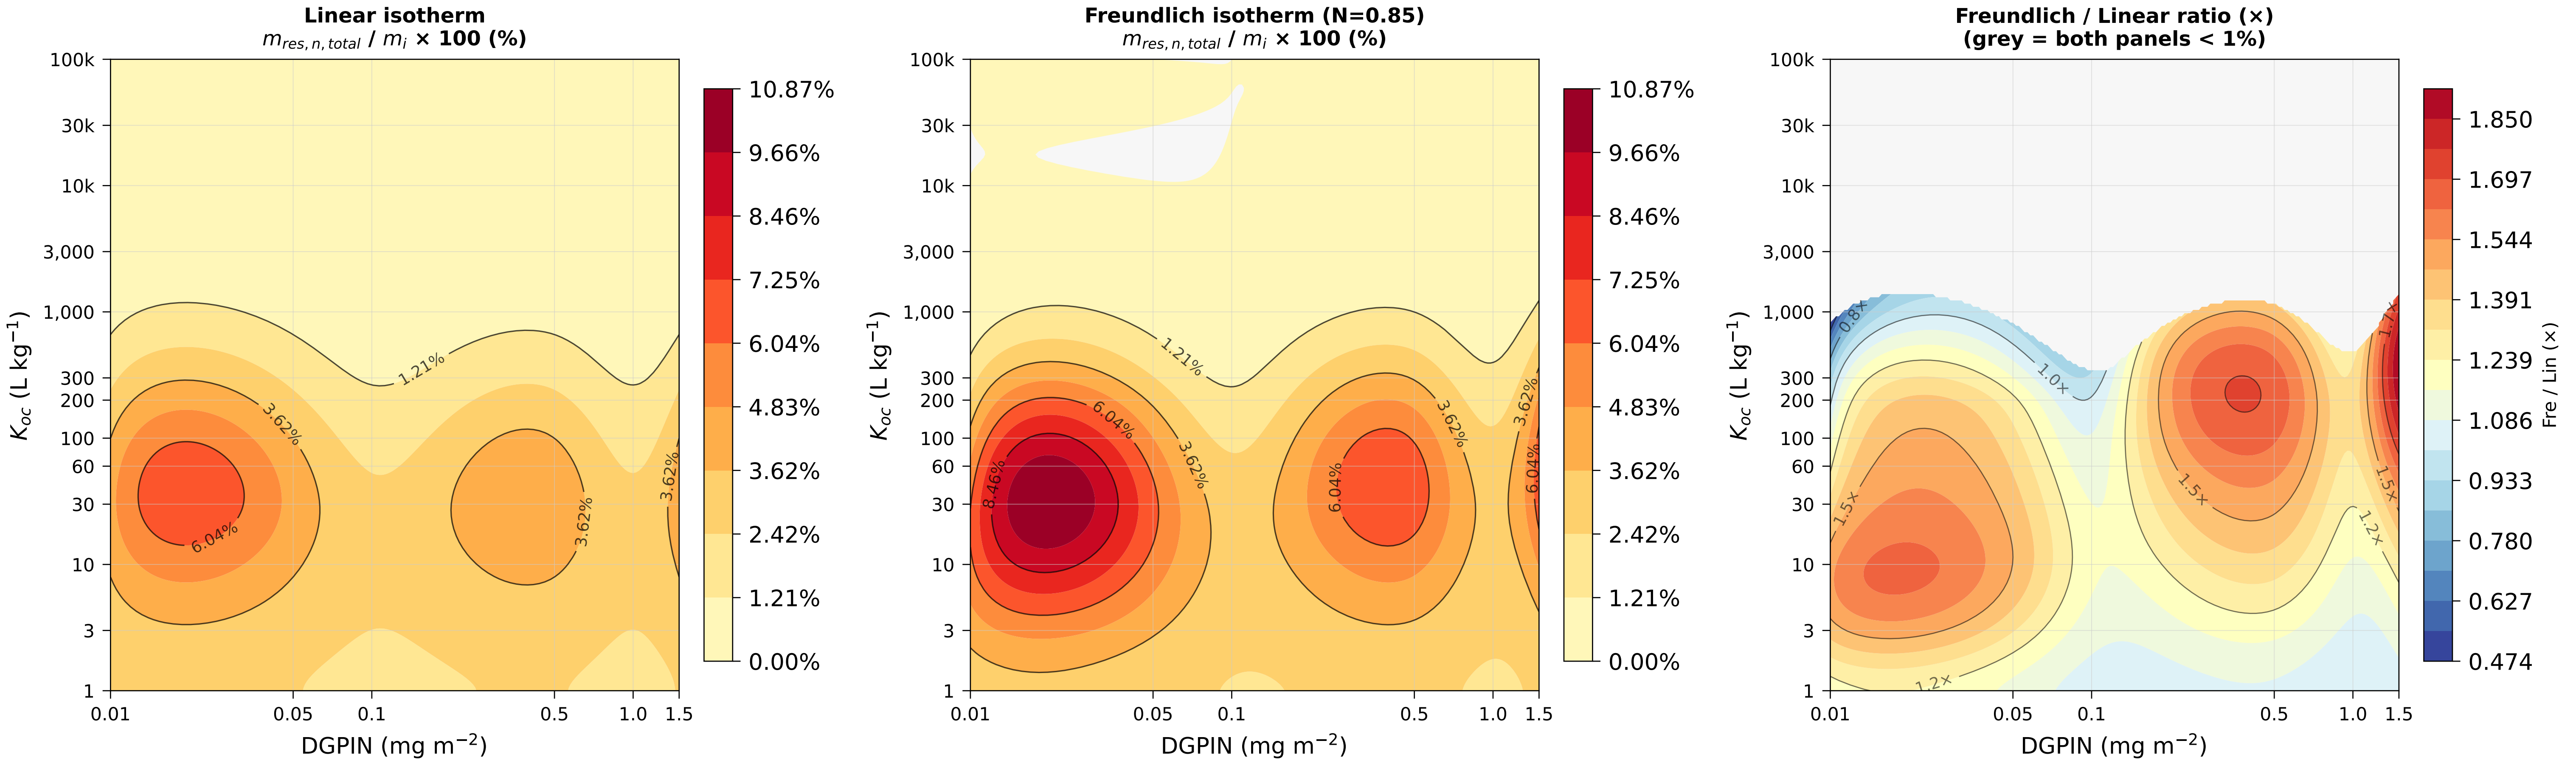
$m_{res,n}$ as % of incoming pesticide mass — REAL VFSMOD

All-events scenario (3 applications) · t½=30 d · OC%=1% · N=0.85 | ratio masked where max(Lin, Fre) < 1%



$m_{res,n}$ and DGPIN both in mg m^{-2} of source area (already normalised in OWQ output)   ratio = $m_{res,n}$ / (DGPIN × 3) × 100
