

Pesticide residue remobilization over successive events
($K_{oc} = 1000 \text{ L/kg} \cdot \text{OC}\% = 1\% \cdot \text{IMOB1} \cdot 3 \text{ events} \cdot \text{dgPin} = 1.0 \text{ mg/m}^2$)

Linear isotherm — all events

$K_d = K_{oc} \times \text{OC}\% \cdot \text{dgPin} = 1.0 \text{ mg/m}^2$ each event

Freundlich isotherm — all events

$K_f = K_d, N=0.85 \cdot \text{dgPin} = 1.0 \text{ mg/m}^2$ each event

Linear isotherm — single application

$K_d = K_{oc} \times \text{OC}\% \cdot \text{dgPin} = 1.0 \text{ mg/m}^2$ event 1 only

Freundlich isotherm — single application

$K_f = K_d, N=0.85 \cdot \text{dgPin} = 1.0 \text{ mg/m}^2$ event 1 only
