

Remobilized residue (mresn) vs K_{oc} for 5 half-lives — 3 events · OC%=1% · IMOB1

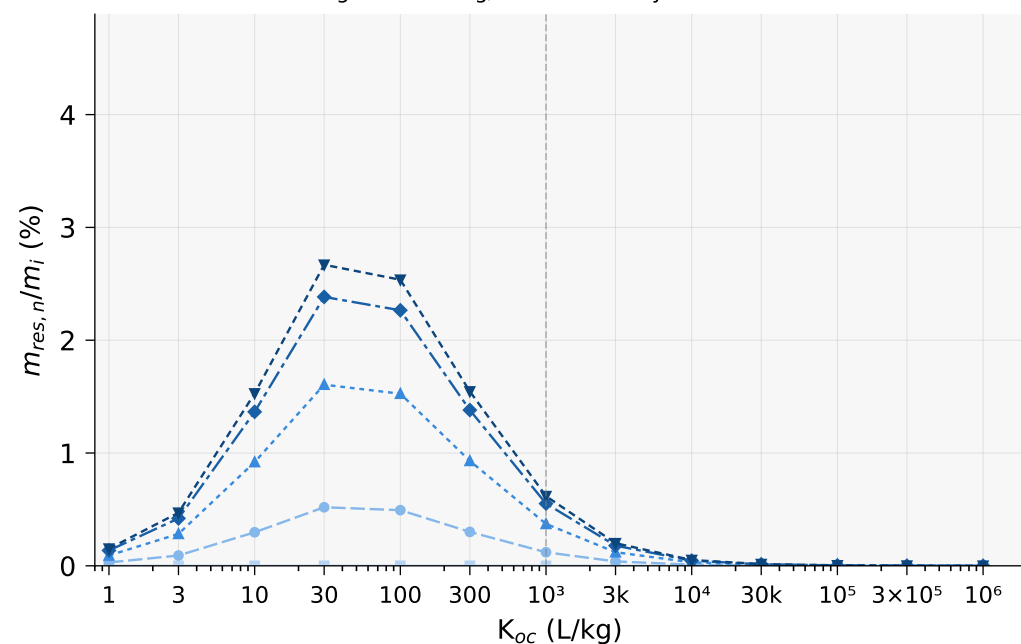

a) Linear — all events
 $K_d = K_{oc} \times 1\%OC$ · dgPin = 0.1 mg/m² each event

b) Freundlich — all events
 $K_f = K_d \cdot N=0.85$ · dgPin = 0.1 mg/m² each event

c) Linear — single application
 $K_d = K_{oc} \times 1\%OC$ · dgPin = 0.1 mg/m² event 1 only

d) Freundlich — single application
 $K_f = K_d \cdot N=0.85$ · dgPin = 0.1 mg/m² event 1 only
