

Total infiltrated (mF) and mixing layer (mfml) mass vs K_{oc} — 3 events · OC%=1% · IMOB1

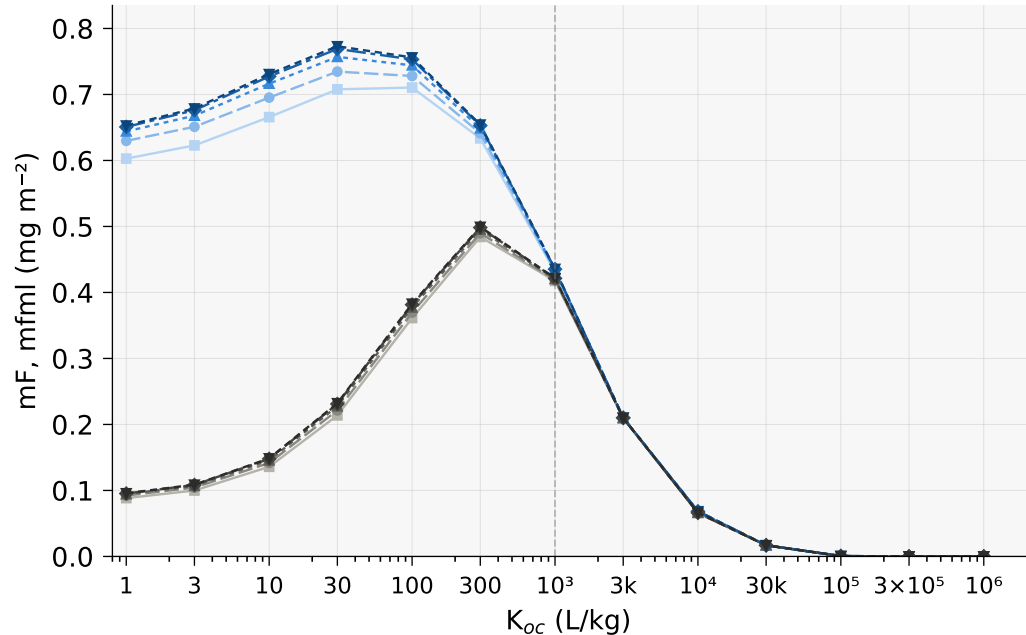

a) Linear — all events

$K_d = K_{oc} \times 1\%OC$ · dgPin = 1.0 mg/m² each event

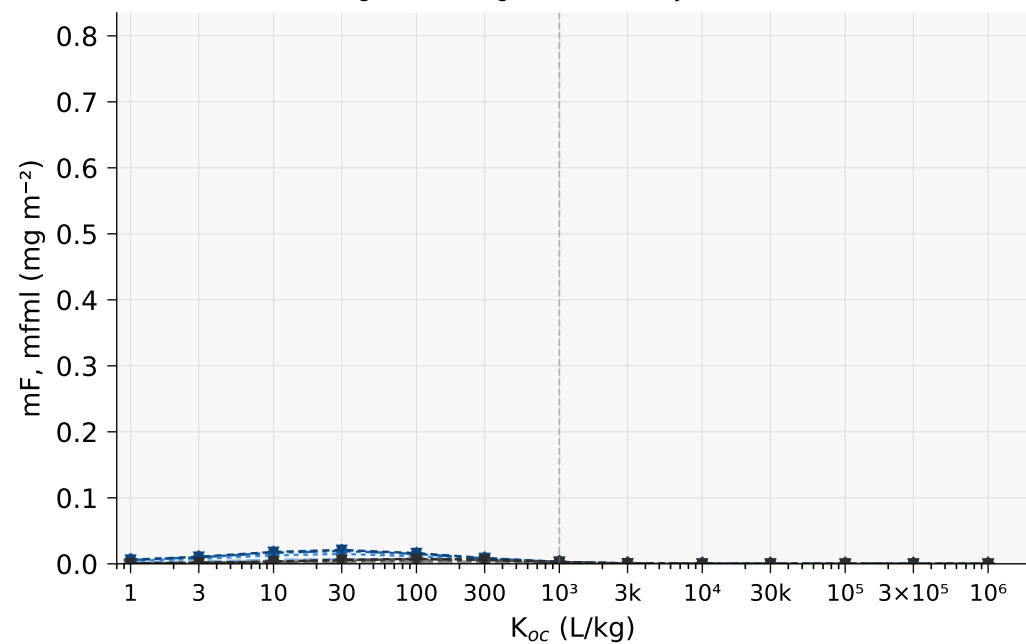

b) Freundlich — all events

$K_f = K_d \cdot N=0.85$ · dgPin = 1.0 mg/m² each event

c) Linear — single application

$K_d = K_{oc} \times 1\%OC$ · dgPin = 1.0 mg/m² event 1 only

d) Freundlich — single application

$K_f = K_d \cdot N=0.85$ · dgPin = 1.0 mg/m² event 1 only
