

$m_{res,n}$  as % of incoming pesticide mass — REAL VFSSMOD  
All-events scenario (3 applications) ·  $t_{1/2}$ =30 d · OC%=1% · N=0.85 (contour)

$m_{res,n}$  and DGPIN both in mg m<sup>-2</sup> of source area (already normalised in OWQ output) ratio =  $m_{res,n} / (DGPIN \times 3) \times 100$
