

$m_{res,n}$ as % of incoming pesticide mass — REAL VFSSMOD
Single-application scenario (event 1 only) · $t_{1/2}$ =30 d · OC%=1% · N=0.85 (contour)

$m_{res,n}$ and DGPIN both in mg m⁻² of source area (already normalised in OWQ output) ratio = $m_{res,n} / (DGPIN \times 1) \times 100$
